

## Introduction

⚠ It's important to note that DAOs can be easily customized and adjusted to fit needs. The information in this document will be revised according to the latest updates on approved plans and ongoing projects.

## Summary

DewDAO (\$DEW) is the native governance and utility token of the MoonEX Exchange, powering a community-driven, meme-first trading ecosystem.

## Staking and Rewards

Users stake \$DEW to earn yield from ecosystem incentives. Stakers receive priority airdrops of new meme tokens and exclusive community rewards.

Access to premium features, such as early listing access, priority support, OTC trading, and reduced withdrawal fees. Used for incentivizing liquidity providers and community contributors.

## Structures and Operations

DewDAO is a collection of builders and partners who hold \$DEW tokens and are in sync to make the project a success. DewDAO is not a company and does not have a management team or staff.

Anyone can propose upgrades and focus points for DewDAO. \$DEW token holders would vote on whether to favor or dismiss these recommendations.

Holding \$DEW entitles holders to raise and vote on recommendations. It does not entitle holders to force their will on others.
